

Treating Autism Chart

ISSUE	Did Child Present Issue Before Therapy (yes or no)	Intervention Used / is issue still present?
Aggressive Towards others	Only when provoked	Only when you threaten his mama. (Joke!)
Anxious/fearful	Very anxious and fearful	Got better as gut healed and we used RDI to help.
Constipation	YES!! Very constipated	Treated the dysbiotic gut with anti fungals, anti bacterials, probiotics, and GFCF diet.
Destructive of things	Yes, would destroy things when anxious or fearful	Got better as "brain fog" cleared with treatment of dysbiotic gut and RDI
Diarrhea	YES!! Explosive (Yes, a child can have crazy constipation followed by crazy bouts of "blah poo" that could only be described as "explosive"	GFCF (SF and SCD), Probiotics...basically healing his gut.
Did not point	Never pointed after 24 months	Came back as we healed his body
Feeding/eating (self limited)	Only drank milk and ate mac and cheese, chicken nuggets and (gasp! variety!) Chef Boy R Dee Beef Ravioli	Went "cold turkey" October 17 after Anaheim DAN conference. After dealing with dysregulated immune system that thought cauliflower was the "enemy" he eats a typical variety of foods.
Vaccine reaction w/in 24 hours:		
- DPT	He received Both DPT and MMR plus flu shot in one Wellness visit. No reaction within 24 hrs except high fever, but note that for the next month, he had rotavirus 4 TIMES. That's when we learned he was allergic to penicillin, amoxicillin and sulfa based antibacterials.	
- MMR	See above.	
- Hep B	Within hours of this one, he turned bright red,	

	screamed himself to sleep, and "forgot" how to suckle. He also banged his head repeatedly for weeks after every subsequent Hep B vaccination.	
Head banging	Once he was mobile, he would bang his head against walls, headboards, crib for 45 minutes until he would fall asleep from exhaustion.	Again, as we healed his body with Dr. Geoffrey Radoff (dealing with his gut and his immune system as well as the inflammation that existed) These behaviors disappeared.
High pain threshold	Very high pain threshold. He never cried because he got hurt. Even when he broke all 3 arm bones in a trampoline accident at age 4. He only looked at his arm with a puzzled look on his face. The same thing with cuts and scrapes. Never cried, just looked at the injury, puzzled.	Again, as we healed his body with Dr. Geoffrey Radoff (dealing with his gut and his immune system as well as the inflammation that existed) These behaviors disappeared.
Hyperactive	Not really, but then again, we had learned how to safely contain and observe him when he was, and also learned what his sensory triggers were that would trigger massive hyperactive behavior.	Again, as we healed his body with Dr. Geoffrey Radoff (dealing with his gut and his immune system as well as the inflammation that existed) These behaviors disappeared.
Inattentive		
Intolerant of change	Very intolerant of change. Especially in a classroom setting. Going from one station to another kicked up his anxiety level SO MUCH. Not so much on driving directions and home schedules.	Again, as we healed his body with Dr. Geoffrey Radoff (dealing with his gut and his immune system as well as the inflammation that existed) These behaviors disappeared.
Normal then regressed	After the initial Hep B shot he received after birth, he progressed normally until the age of 2 years. Although, knowing what I	

	know now, he regressed bit by bit with every multiple vaccination he received until the damage culminated into something we could no longer ignore.	
Poor eye contact	Eye contact was physically painful for him.	Again, as we healed his body with Dr. Geoffrey Radoff (dealing with his gut and his immune system as well as the inflammation that existed) These behaviors disappeared.
Repeated courses of antibiotics	He had 4 back to back bouts of rotavirus, each with a 10 day course of antibiotics between each one. After that, the regression became accelerated.	
Repeated ear infections	Nope. Just fevers and explosive poo.	
Rocking	He would rock himself, or I (the only person who he would allow to hold him) would rock him for HOURS. Would also curl up like a shrimp or put abdomen on objects (sofa arms, balls, ottomans)	Again, as we healed his body with Dr. Geoffrey Radoff (dealing with his gut and his immune system as well as the inflammation that existed) These behaviors disappeared.
Self injurious	He would bite himself if all the non-edible "chewable" stuff was taken away from him.	Again, as we healed his body with Dr. Geoffrey Radoff (dealing with his gut and his immune system as well as the inflammation that existed) These behaviors disappeared.
Sleep difficulties	Wouldn't sleep till 2-3 in the morning. Moaning, curled up like a shrimp or with his abdomen on a stuffed animal or pillow. He would also sweat so profusely when he did sleep! I had to put towels	Again, as we healed his body with Dr. Geoffrey Radoff (dealing with his gut and his immune system as well as the inflammation that existed) These behaviors disappeared.

	under him and on his pillow. His night sweat was metallic and foul smelling.	
Sound sensitive		Again, as we healed his body with Dr. Geoffrey Radoff (dealing with his gut and his immune system as well as the inflammation that existed) These behaviors disappeared.
Stimming:		
- Hand flapping	Not hand flapping, but he would watch his fingers "flicker"	
- Lining up objects	God help your soul and sanity if you dared remove or touch any object he lined up!	
- Spinning		
- Toe walking		
- Other:	Moaning. Heart wrenching, empty sounding moaning.	
Tantrums	When things became "too much", his tantrums would last HOURS.	
Toilet training problems	At 5 1/2 he was still wearing pull ups and had no problem sitting in a full diaper. Was not even interested in going on the toilet. Only went on the toilet as part of his ABA program, but never used it.	Was not toilet trained until 10 days AFTER we cleaned up his diet and started him on supplementation and HBOT treatments. After that, had a few mistakes, then fully potty trained a month after that.
Unaware of danger	Totally unafraid and unaware. Would walk out into the street to touch moving cars. As one therapist said, "He wouldn't even look up if a chainsaw murderer came into the room and everyone was running around screaming."	Totally typical now. In fact, he's an excellent older brother that keeps his younger bro safe!
